metabolism, including diseases such as atherosclerosis. Polynucleotides of the invention are used to screen candidate molecules or substances that are capable of modulating the transcription of the ABCI gene. They are used in antiscuse therapy, Compositions comprising sequences of the invention are used to treat hypercholesterolaemia and atherosclerosis.
                                                                             The invention relates a nucleic acid which is capable of regulating the transcription of human ATP-binding cassette 1 (ABC1) gene, which is a casual gene for pathologies linked to a dysfunctioning of cholesterol
(ABC1) and screening for candidate modulatory compounds or substances
                                                                                                                                                                                                                                                                                                                                                             61 GAGCCACACGCTGGGCGTGGCTGAGGGAACATGGCATGTTGGCCTCAGCTGAGGTTG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                             Ö
                                                                                                                                                                                                        The invention relates a nucleic acid which is capable of regulating the transcription of human ATP-binding cassette [ ABF] denc, which is a casual gene for pathologies linked to a dystunctioniar of cholestero) metabolism, including diseases such as atheroscierosis. Elymichectides of the invention are used to screen candidate molecules. I substances that are capable of modulating the transcription of the ARCI gene. They are used in antisense therapy. Compositions compressing sequences of the invention are used to treat hypercholesterolaemia and attarosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Isolated nucleic acid useful for modifying the ATP-binding cassette (ABCL) and screening for candidate modulatory compounds it substances

                                                                            The present sequence encodes a human adenosine triphosphare (AIP) binding cassette protein (ABC) I polypeptide. ABCI resids in cell membranes and utilises ATP hydrolysis to transport a wise variety of substrates across the plasma membrane. ABCI is a protein mediated mobilisation of intracellular obclein in the apolipoprotein-mediated mobilisation of intracellular obclein in strones. ABCI is defective in Tanajer disease, a quelic diseascier claracterised by abnormal BDE-cholestero inetabolism. The ABCI quells localised to chromosome 9422-9431. The ABCI quees and proteins are
                                                                                                                                                                                                                                      with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovasculur disease and

disease and other disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated
                                                                                                                                                                      Adenosine triphosphate (ATP) binding cassette protein (ABC) 1 polynucleotides and polypeptides, useful for treatment of heart disease and other disorders associated with hypercholesterolemia and
                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence encodes a human adenosine triphosphate (ATP) binding cassette protein (ABC) I polypeptide. ABCI resides in cell membranes and ultilises AFP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABCI is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABCI is defective in Tangier disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABCI quie is localised to chromosome 9422-941. The ABCI genes and proteins are useful for developing pharmaceutical agents for the treatment of heart
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   with cholestero, transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and other diseases associated with hypercholesterolemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             92 ACATGGCATGTTGGCCTCAGCTGAGGTTGCTGTGGAAGAACCTCACTTTCAGAAGAA 151

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence encodes a human adenosine triphosphere (AFP) binding cassette protein (ABC) I polypeptide, and is is lated from a Tangier disease patient. ABC) is said to cell membranes and stillses AFP hydrolysis to transport a wide variety of substrates across the flasma membrane. ABCI is a pivotal protein in the apolysaproficin-mediated mobilisation of intracellular cholesterol stores. ABCI is defective in Yangier disease, a genetic disorder characterised by assemble the Mills-cholesterol metabolism. The ABCI gene is localised to chromosome 9922 9931. The ABCI genes and proteins are usuful for developing pharmaceutical agents for the treatment of heart disease and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    disorders associated with hypercholesterolemna and ather sclerosis. The genes are useful for developing screening assays to screen for compounds that requiate the expression of genes associated with confesterol transport. The genes and proteins are also useful for any also useful as diagnostic indicators of cardiovascular disease and ciber disorders associated with hypercholesterolemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Adenosine triphosphate (AIP) binding cassette (ARC) polymore-pitte, useful for the development of agents for the treatment of heart disease and other disorders associated with hypercholesterolomia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  HER THE CHILD FILL FOR THE CONTROL THE CONTROL OF T

The present sequence encodes a human adenosine triphosphate (AIP)

binding cassette protein (ABC) I polypeptide, and is isolated from
a Tangler disease patient. ABCI resides in cell membhanes and utilises
a Tangler disease patient. ABCI resides in cell membhanes and utilises
blasma membrane. ABCI is a pivotal protein in the apolipoprotein-mediated
mobilisation of intracellular cholesterol stores. ABCI is detective in
Tangler disease, a genetic disorder characterised by abnormal
HDL-cholesterol metabolism. The ABCI gene is localised to chromosome
of 942-9431. The ABCI genes and proteins are useful for developing
pharmaccutical agents for the treatment of heart disease and other
disorders associated with hypercholesterolemia and atheroscierosis. The
genes are useful for developing screening assays to screen for compounds
that regulate the expression of genes associated with cholesterol
transport. The arenes and proteins are also useful for are also useful
as disquestic inhibitators of cardiovascular disease and other disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ·;

ABCI resides in cell membrane and ifiliasis. AIP hydrolysis to transport a Wide variety of substrates across the piasma membrane. ABCI is a pivotal protein in the apolic paracein mediated membranes of intracellular coblesterol stores. ABCI is detective in the apolic paracein mediated membranes of intracellular coblesterol stores. ABCI is detective in the abclesterol metabolism. The ABCI done is local sed in chronosome 9922-993. The ABCI genes are useful for developing plantaceutical agents for the treatment of heart developing of plantaceutical accordance with hyperchlosteroriems and after sole as sole developing ecrevising associated with hyperchlosteroriems and according to the registrate the expression of quies associated associated associated.

The present sequence encodes a human adenosine triphosphate (ATP) binding cassette protein (ABC) I polypeptide, and is isolated from a langiar disease pattent. ABCI resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the piasma membrane. ABCI is a pivoral protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABCI is defective in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cho.esterol transport. The genes and proteins are also useful for are also useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polynucieotides and polypeptides, useful for treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 disciders associated with hypercholesterolemia and atherosclerosis. Sequences ABBIU981-ABB12330 represent 1350 novel human polypeptides, and sequences ABAG8225-ABAU9574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of identifying compounds which bind to polypeptides in a sample, and methods of identifying compounds which polypeptides to the invention and nethods of identifying compounds which prolypeptides of the invention have bomological activities, and honce potential therapeutic applications. The polypeptides of the invention may have various activities including eytokine, cell proliferation or cell differentiation activities; stem cell growth factor activity; have various activities; stem cell growth factor activity; mmunomodulatory activity activity activity activity activities; hambon-related activities; chemostatic or chemostatic activities; hambon-related activities; controlled in our accesses, concert cell proliferation or metastasis.

Depending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or decilorating medical conditions, e.g., by protein or gene therapy. Such confidence include canders, haematopoictic disorders (e.g., myeloud or lynginsid cold disorders), chronic inflammatory conditions (e.g., assume or artiritis), profiferative retinopathy, atheroscierosis, coronary heart disease, arterial ischaemia, bone disorders (e.g., osteoporosis), and absorbal vascular growth, Polypeptides involved with tissue reaccention and
                                                                                                                                                                                                                                                                                   that can be used to addment or replace cells damage by . Incss. autoimmune disease or accidental damage. The polypoptics and marketimes may also be used in the diagnosis of the akeye conditions, and in drug screening techniques. The present segione represents a cisM exemina a
                                                                                                                                                  repair (or nucleic adds encoding them) may be used to promote wound becaling (e.g., of burns, incisions and ulcets), while these with immunonabilatory activities may be used in the treatest of viral bacteria; and fungal infections in addition to immune ensureders. Prypeptiates with growth factor activity may be used in each onlines to promote cell growth. For example, such pulypeptiates must be used for municipalist stem cells in culture to give rise to represent belief

                                                                                The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity eleting to eytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth tactor activity, immunomodulatory activities, activity, issue growth lactor activity, immunomodulatory activity and activity inclinibin activity and may be useful in the diagnosis and/or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
      The invention relates to four common polymorphisms in the gene encoding APP-binding cassette transporter-1 (ABC1). ABC1 is associated with decreased ApoA1 mediated efflux of cholesterol. The polymorphisms in ABC1 directly affects cellular liptod homeostasis, which is a key fartor in the atherogenetic processes. The ABC1 polymorphisms are useful for diagnosing and treating lipid disorders, cardiovascular 1. Seases (coronary heart disease, atherosclerosis) and intlammatory diseases (psortasis, lupus erythematosclerosis), diagnosing and transporter for interleukin-libeta (1. Deta) identities this gene as a candidate for interleukin-libeta (1. Deta) identities this gene as

The invention relates to polynucieotides (AAK51495 AAK6518) and the encoded polypeptides (AAM78323-AAM80302) that exhibit delivity dealing to eytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or poptide therapy. The polypeptides have various cytokine, the delivities, e.g. stem cell growth factor activity, harmatopolesis is anolating activity tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosts and/or treatment of cancer, leukaemia, nervous system disorders atthritis and

The invention relates to the human ABC1 cholesterol transporter protein (1938082) and to nucleic acid sequences (C69120) which encode it. ABC1 is a member of the ATP-hinding cassette (ABC transporter) superiamily of proteins, and plays a crucial role in cholesterol transport, particularly components, and plays a crucial role in cholesterol transports, being involved in cholesterol efflux from the cell. The gene encoding ABC1 is coated on chromosome 9q31, and mutations in this gene are associated with two genetic HDL (high density lipoprotein) deficiency disorders. Tangier disease (TD) and familial HDL deficiency (FHA). These diseases are distinguishable in that TD is an autosomal recessive diseases are distinguishable in that TD is an autosomal recessive disease. CC FHA is inherited as an autosomal dominant trait. Low levels of HDL (good correlate with a high risk of cardiovascular disease, particularly octonary artery disease, but also cardiovascular disease. Conversely, a high level of HDL has protective effects against disease, coronary restences; and peripheral vascular disease. CC cardiovascular disease. CC cardiovascular disease. CC cardiovascular disease comprising the administration of an expression vector encoding ABC1 or an active fragment thereof. The invention also compusases compounds which mine ABC1 expression and methods of screening for such compounds. CC stimulate ABC1 expression and methods of screening for such compounds. In the mine disease due to polymorphisms in the increased risk for cardiovascular disease. CC repression and nucleotides can be used to treat or prevent cardiovascular disease. CC or performer a patient was in the compense of the proper and active fragment disease. The reference or performer disease. CC or prevent corporary restances or propered corporary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention specifically excludes proteins with the exact amino acid sequences of GenEank Arcession No: CANIOUGS.1 and X75926, and the nucleic acid with the exact sequence as GenBank Accession No: AJ012/16.1. The

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Small A mini-library was made by cloning products delived trom ORESTES PCR (U.S. Letters Patent application No. 195 776 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of tissue mRNA and cDNA amplification were performed under 10% stringency conditions."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       zebrafish hearts (3 day post-fertilization). cDNA was synthesized using a XhoI-Oligo dT adaptor-primer. ECORI adaptors were ligated, followed by digestion with XhoI, for directional cioning into pre-digested lambda ZAP Express vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /organism="Danio rerio"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /note-"Vector: psPakTl: Site 1: Not1,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          subsequently streemed by literanties the obtained a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1,50

Institut fuer Molekulare Genetik, Berith, CDNAS for EST analysis were selected following of genet-cotide hybridization fingerprinting of arrayed clones from zebrafish late Somitogenesis (26 ss), admit liver or embryonic shield stage (5.6 h) libraties. Fingerprint data were used to computationally cluster cDNAS, and a single CDNA from each cluster was chosen for sequencial in some cases multiple members of the same citater were sequenced to assess clustering parameters or single clones were sequenced additional times to assess quality
